EDUCATION

University of Technology Sydney (UTS)

Bachelor of Information Technology with Credit (Major: Enterprise Systems Development)

Sydney, Australia

2021 – 2025

- **Academic Standing: WAM: 80.54 | GPA: 6.09 / 7.00** (High Distinction / Distinction Average Standing)
- **High Distinction (HD) Coursework:** Advanced Software Development (**97/100**), Introduction to Software Development (**96/100**), Programming on the Internet (**96/100**), Theory of Computing Science (**95/100**), Application Development with .NET (**89/100**), Data Structures and Algorithms (**89/100**), Software Architecture (**86/100**)

Suffolk University

Undergraduate Coursework in Big Data & Computer Science

Boston, MA, United States

2018 – 2019

- Completed foundational coursework in Big Data analytics, algorithms, and computational principles before relocating to Australia.

SELECTED PROJECTS

Hotel Booking & Management Monorepo | *React, TypeScript, Node.js, Express, Docker, Nx Monorepo, Jest* | [GitHub](#) 2023 – 2024

- Architected full-stack enterprise hotel management monorepo awarded cohort-leading **97/100 (High Distinction)** capstone grade.
- Engineered interactive real-time room availability matrix and amenities booking workflows (dining, spa, events) with automated conflict detection.
- Containerized client and server microservices using Docker Compose, establishing reproducible local and production deployment pipelines.

Car Rental Booking Platform | *Golang (Go), React 19, TypeScript, Vite, Tailwind CSS, REST API* | [GitHub](#) 2024 – 2025

- Engineered high-performance vehicle rental platform pairing a high-concurrency Go REST API backend with a responsive React 19/Vite frontend.
- Developed dynamic rental pricing algorithms and real-time vehicle availability filters, delivering sub-50ms query responses (UTS Mark: **96/100 HD**).
- Implemented transaction-safe reservation workflows guaranteeing ACID compliance and eliminating double-booking edge cases.

Convenience Store POS & Inventory Desktop Suite | *C#, .NET, WPF, Microsoft SQL Server, MVVM* | [GitHub](#) 2023

- Architected desktop Point-of-Sale (POS) and inventory software in C# .NET and WPF following strict MVVM patterns (**89/100 HD**).
- Designed normalized SQL Server relational schema for real-time stock deductions, transaction audit trails, and revenue reconciliation.
- Integrated barcode scan audio cues, receipt printing simulation, and inventory threshold alerts to streamline cashier checkout.

IoT Bay E-Commerce Platform | *Java, JSP, Servlets, MySQL, Apache Tomcat, JDBC, MVC* | [GitHub](#) 2023

- Designed and deployed an MVC-patterned e-commerce web platform in Java and MySQL for IoT hardware cataloging (**96/100 HD**).
- Implemented direct JDBC persistence layer with connection pooling and parameterized SQL queries, eliminating SQL injection vulnerabilities.
- Built Role-Based Access Control (RBAC), administrative consoles, and an end-to-end customer order tracking lifecycle.

- Implemented K-Nearest Neighbors (KNN) classification from first principles in Python/NumPy without external ML estimators (**80/100 Distinction**).
- Benchmarked Euclidean, Manhattan, and Minkowski distance metrics with systematic hyperparameter *k*-tuning across multi-dimensional datasets.
- Authored analytical research paper analyzing curse of dimensionality, decision boundary geometry, and normalization dynamics.

PROFESSIONAL EXPERIENCE

Hanoi Radio Television (Hanoi TV / HNTV)
Software Development & Media Systems Intern

Hanoi, Vietnam
Nov 2023 – Feb 2024

- Engineered responsive metadata cataloging and video segmentation interfaces using Vue.js, streamlining media retrieval for broadcast editors.
- Designed and implemented performant REST API endpoints in Node.js and Express to query and filter 10,000+ indexed broadcast records, reducing retrieval latency by 35%.
- Constructed normalized relational schemas and optimized SQL query execution for program scheduling archives.
- Collaborated with senior broadcast engineers to test, document, and deploy metadata archiving microservices across production networks.

Retail Customer Operations
Customer Operations & Retail Team Member

Sydney, NSW, Australia
2022 – 2024

- Processed 100+ cashier and POS transactions per hour during peak periods, consistently maintaining 100% register reconciliation accuracy with zero cash drawer discrepancies.
- Demonstrated high operational discipline and resilience by balancing 20+ hours per week of customer-facing duties concurrently with full-time IT studies at UTS (maintaining an 80.54 WAM).
- Managed stock intake, FIFO replenishment, and inventory loss prevention protocols across hundreds of high-turnover SKUs.

TECHNICAL SKILLS

Programming Languages: TypeScript, JavaScript (ES6+), Golang (Go), C# (.NET Core), Python, Java, C++, SQL
Frontend Frameworks: React 18/19, Next.js 14, Vue.js, Tailwind CSS, WPF (XAML)
Backend & Systems: Node.js & Express, Go REST APIs, ASP.NET Core Web API, Docker
Databases & Cloud: MySQL, MongoDB, Microsoft SQL Server, AWS Cloud
Tools & Architecture: Git & GitHub, Vite, Nx Monorepo
Languages: English (Professional Working Proficiency), Vietnamese (Native / Bilingual)

HONORS & AWARDS

High Distinction Standing	WAM: 80.54 / GPA: 6.09 / 7.00 — University of Technology Sydney	2021 – 2025
Top Coursework Award	Mark: 97/100 HD — Advanced Software Development (41026), UTS	2024
Top Coursework Award	Mark: 96/100 HD — Introduction to Software Development (41025), UTS	2023
Top Coursework Award	Mark: 96/100 HD — Programming on the Internet (31748), UTS	2025
High Distinction Award	Mark: 95/100 HD — Theory of Computing Science (41080), UTS	2024
High Distinction Award	Mark: 89/100 HD — Application Development with .NET (31927), UTS	2023
High Distinction Award	Mark: 89/100 HD — Data Structures and Algorithms (31251), UTS	2023
