EDUCATION

University of Technology Sydney

Bachelor of Computer Science (Honours)

Expected, December 2024

Double Major – Enterprise Software Development and Business Information System

Relevant coursework: Introduction to software development, Advanced Software Development, Data structure & algorithm, Programming 1 and 2, .Net computing, AWS cloud computing.

- GPA: 3.6, WAM 85 or 6/7

SOFTWARE & DESIGN PROJECTS

Hotel Booking Management Webapp -Advance Software Development

July 20, 2023 – Present

Project Detail: <https://github.com/mclarence/Hotel-Management-System.git>

- Develop a dynamic hotel booking management web application by JavaScript and React - front end.
- Engineered main dashboard page and a user list for streamlined hotel booking page.
- Develop and modify room availability in both staff and admin view, in order to update room for customer.
- Build a booking page for staff to manage various services within the hotel system including the bar, lounge, spa, swimming pool and events.

Ecommerce website (IOT Bay) – Subject Introduction to software development

February 20, 2023 – Jun 10, 2023

Project Detail: <https://github.com/Jason1136/IoTBay>

- Develop “IOT Bay” e-commerce platform specializing in IoT device sales.
- Develop order tracking page, providing customers with real time delivery update and order status.
- Design and implemented tracking user page where admin can view the dashboard, accessible for updating new password and permission level for each user.

Deck card shuffle – Data structure & algorithm

February 20, 2023 – Jun 10, 2023

- Developed and implement a C++ deque data structure using two std::vectors and use supported various template types (int, double, char, std::string).
- Implemented constructors for size initialization and initializer list and must control functions for checking emptiness and obtaining the size.
- Achieved constant-time access to front and back elements, manage efficiently accessed elements by index using operator []. Also enabled constant-time push/pop operations from both ends.
- Illustrating coding proficiency and problem-solving abilities.

Calculator – Data structure & algorithm

February 20, 2023 – Jun 10, 2023

- Enhanced a Stack Calculator project for evaluating infix arithmetic expressions.
- Developed a C++ function, infixToPostfix, to convert infix expressions to postfix notation.
- Utilized the Shunting Yard algorithm, considering operator precedence.

Snake game Java – Application Programming

Jun 10, 2021

- Using Java to design small console app compile by BlueJ to run Snake game with GUI
- Gained expertise in encapsulation and polymorphism for Object Oriented Programming during this project
- Build GUI and button: start game, end game, playing game

Sample GUI for a Cinema - Application Programming

Jun 10, 2021

- Create a movie ticket menu GUI
- Create Add button for menu: Theatres, Movies, Sessions

SQL Logic Level Database Design – Database Fundamental

Jun 10, 2021

- Develop basic data base programming about how to use sequel to manage data
- Use sequel to create table, manage overwhelming amount of data
- Use sequel to develop three project in sorting data

Internship

Organization: CMC corporation

Nov 2023 – Feb 2025

Programming Languages SQL, Java, NodeJS, HTML, Framework (VueJS)

- Developing a sorting meta data webapp for Hanoi TV (capitol media)
- Develop front end layout for the project
- All sorting meta data (video, clip daily can be merge or cut out to combine into 1 documentation)

Project Detail: <https://github.com/Kaiwannafly/HNTV-Management.git>

TECHNICAL SKILLS

Programming Languages	SQL, Java, C++, HTML, C# (DotNet Framework), JavaScript
Databases	MySQL
Operating Systems	Window, IOS
Web Design	XML, PHP, JSP
IDEs	Notepad++, Visual Studio Code, Microsoft Visual Studio, Ed, Mathlab
